

PicTrack Overview: Icon - Voice Vaccine & Milestone Tracking for SDG 3.2

- Milestone tracking for child immunization schedules (by age in weeks/months).
- › - **Icon-based UI** (e.g.,  syringe) to communicate each visit type at a glance.
- › - **Voice/text guidance** to read step-by-step visit instructions and vaccine purpose.
- › - **SDG 3.2 alignment:** supports improved vaccination coverage and timely uptake.

Barrier-Free Design: No Accounts, No Backend, Local-Only Data (localStorage)

No user accounts: you can use the app immediately.

- › **No backend required:** data stays on your device.
- › **Local persistence via localStorage:** state survives page refreshes.

Frictionless start: no sign-in, no verification, no server interaction.

- › **Privacy-friendly:** child profile and onboarding status are stored locally.
- › **Safe in non-browser contexts:** SSR guards prevent access to window.

WHO Routine Immunization Schedule: Turning Table 2 into a Simple App Flow

Example entry

- › **id:** "hepb-birth"
- › **ageWeeks:** 0
- › **label:** "At birth"
- › **audioText:** booster/strengthening messaging

Takeaway: pictrack converts WHO Table 2 into a single normalized schedule dataset, then uses that same structure to drive ordering, display, and audio guidance.

**Core Loop: See Next Due Vaccine →
Hear Spoken Explanation (Web Speech)
→ Mark Done**

**Core Loop: See Next Due Vaccine → Hear
Spoken Explanation (Web Speech) → Mark
Done**

1) See Next Due Vaccine

pictrack reads the immunization schedule and surfaces the next visit
based on age (e.g. 9 weeks, 9 months, 15 months)

Color-Coded Status & Iconography: Making Milestones Understandable at a Glance

pictrack uses consistent visual cues to communicate childhood vaccination milestones quickly and clearly.

Real-Time Experience: Synchronized Audio Transcript for Every Vaccine Step

Built in **pictrack** to align each scheduled immunization with an accessible, step-by-step spoken transcript.

- **Maps every visit (e.g., at birth, 6 weeks, 10 weeks) to a specific transcript.**
- › - **Keeps audio & text in sync** so the user hears and reads the same guidance at each step.
- › - **Uses consistent scheduling data** from `/lib/schedule.js` (WHO routine immunization schedule).
- › - **Supports accessibility** via clear, structured transcript copy for each vaccine action.

Component & Code Structure: Next.js App Router + Tailwind + Lucide with Small, Reviewable Modules

Keep the pictrack codebase easy to scan and review by splitting concerns into small, focused modules. UI is composed with Next.js App Router, styled with Tailwind, and iconography via Lucide.

Browser-only behaviors (like onboarding and child data persistence) are isolated in storage helpers under `/lib` so components stay mostly
